

# Insect and Arachnid Pack

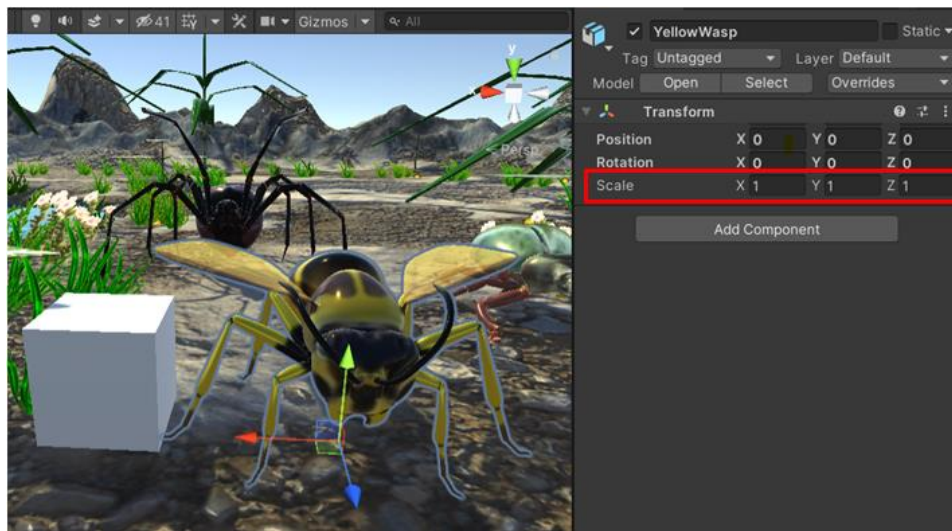

Thank you so much for purchasing our pack of insects and arachnids!

We are sure that your satisfaction will be guaranteed by using our assets in the construction of your Unity project.

All our models comes with texture, rig and main animations. However, we recommend the procedures below for the proper application of the models,

You may have noticed, the scales of the models are larger than the real-world standard and will take some adjustments to suit your scene.

Look at the figure below that the yellow wasp is larger than the standard Unity Engine cube that has the dimensions 1x1x1 meter. In that case the wasp would be gigantic compared to the real world.

However you can adjust the size of the insect according to its application by modifying its scale as in the following figure.

Note the size of the wasp relative to the cube when we place the scale at 0.1x0.1x0.1 meters.
